Section 3: Short Answer:-

7. Describe the steps involved in troubleshooting a computer that fails to boot into the operating system.

Ans: This is steps involved in troubleshooting a computer that fails to boot into the operating system:

1. Power and Hardware Checks:
 - ➔ Confirm the computer is receiving power and see like lights, fan noise, or screen activity.
 - ➔ If you not see then power supply, battery, or cables. Sometimes loose RAM or storage drives also boot issues, so reseating them can fix.
2. BIOS/UEFI Settings:
 - ➔ Open BIOS/UEFI. Check if hard drive/SSD is detected and set as first in boot order.
3. Error Codes and Messages:
 - ➔ Check for beep sounds, lights, or error messages. They can tell you which part is not working.
4. Safe Mode and Recovery Options:
 - ➔ If the computer starts but doesn't load fully, try using Safe Mode or recovery tools to fix the problem.
5. Operating System Corruption:
 - ➔ System files might be broken. Use repair tools or file check options to fix them.
6. Hardware Failures:
 - ➔ If software fixes don't work then check the RAM, hard drive, or other parts for problems.
7. Reinstallation of the Operating System:
 - ➔ If nothing works, save your files and install the OS again.
8. Post-Recovery Measures:
 - ➔ After fixing, update drivers, check for viruses, and keep copies of your files.
